

SPFx WEB PART DEPLOYMENT & USAGE INSTRUCTIONS

Overview

Power Popups for SharePoint is the most effective way to communicate your message and ensure it gets the required attention from your users. With Power Popups, you can create Popups that display any content. Choose to add the Popup Content from a Page URL, HTML, or Rich Text. Target a Specific Audience and create Auto Popups that only show the amount of times you set for each User. You can even schedule Automatic Popups to display in a given date/time range!

Use Power Popups for alerts, banners, forms, news items, documents, galleries, redirects on close, and any element. Display your Popup content more effectively and with style.

Power Popups is the SPFx Webpart that comes with a wide range of available options, that let you create combinations of Popups and achieve eye-catching effects for your messages easily and without any special coding knowledge.

Deployment Instructions Microsoft AppSource

- Visit the following link and install from Microsoft AppSource – Search “Power Popups”.

Deployment Instructions ZIP Download

- Request the Power Popups SPFx Web Part from <https://sharepointpowerpopups.com/support>.
- Unzip the package that is provided via support.
- The package contains 2 files as listed below:
 - power-popups.sppkg (Modern Page – Client Web part)
 - PowerPopupsforSharePoint_SPFxUserGuide.pdf (Deployment Guide)
- We are assuming that app catalog site is already configured in your Tenant. If not, kindly follow [this link](#) to configure app catalog site.
- Navigate to your App Catalog site and select Apps for SharePoint from left navigation.
- Upload power-pop-ups.sppkg file over there. It will prompt you to trust the application. Click on Deploy button to add it into your site.
- Once you click on Deploy button, Power Popups Web Part is added into your Tenant and then you can use it in any site. After successful adding of SharePoint Power Popups Web Part, please verify the App Package Error Message column, it must be having value as No errors.

Manage apps

Upload, enable, and manage apps. To update SharePoint Store apps, go to the [classic experience](#).

Update

Open Popup

Overlay Configuration

- **Is overlay visible:** This field will allow you to decide whether you want an overlay with the popup.
- **Can Overlay close the popup:** When you click on overlay, this field will allow you to decide whether you want to close the popup on the overlay.
- **Overlay animation:** This field will allow you to set the overlay animation effect.

 Shows or hides the popup overlay.

Is overlay visible?
☒ Yes

 Defines if the overlay can close the popup.

Can overlay close the popup?
☒ Yes

 Sets the overlay animation effect.

Overlay animation

fadeIn

Popup Configuration

- **Popup Type:** This field will allow you to decide when this popup opens. We have two types as below:
 1. On Click: when the user selects this, the pop-up can be open via clicking on the button.
 2. Auto Open popup: when the user selects this, the pop-up will open on page load. We also have an option to hide popup triggers from the page. You can choose to set how many times a Popup opens automatically from Max Auto Popup option. The Delay Time in seconds opens the auto popup after selected seconds.
[When user chooses 'Auto Open Popup' and configures 'Max Auto Popup Show Count' an entry is made in the users browser's Local Storage based on its unique Guid with selected Show Count. - The Popup will open automatically for each user for the set number of times. Every time the user closes the automatically opened popup, the view count will be increased by one. Upon reaching the Show Count limit the 'Auto Open Popup' will not appear for the user automatically but can be opened by clicking the trigger, if not hidden.]

NOTE: Only 1 auto open popup should be added in a page.

Auto Open popup

i Select the type for the Popup instance.

⚠ Only 1 'Auto Open Popup' should be added on a page.
